

Many organizations have asked for a BlackBerry¹ email and PIM (calendar, contacts, and tasks) wireless mobility solution that directly connects to their email platform but does not require any middleware server or software. The NotifySync solution provides organizations of all sizes secure, real-time, wireless synchronization of email and PIM to and from any BlackBerry. NotifySync² provides direct connect support to several email platforms namely Exchange Server 2003/2007, Windows Small Business Server 2003, Kerio Messaging Server, and Zimbra Collaboration Suite. NotifySync provides organizations with a synchronization solution that offers them support on all popular cellular voice and data networks as well any 802.11x wireless network.

Directly connect your BlackBerry wirelessly to Exchange Server 2003/2007, Windows Small Business Server 2003, Kerio Messaging Server and Zimbra Collaboration Suite.

With NotifySync, users have the ability to compose, reply, forward, or delete their email while mobile. A variety of email attachment formats is supported as well. Email folder synchronization, including sent, draft, and trash folders, are all configurable on the BlackBerry. The user can also configure the frequency at which he/she receives messages and the synchronization range, which serves to control the quantity of messages kept on the BlackBerry. Support for accepting or declining meeting invitations is also available, as well as remote access to the organization's Global Address Book. Users can also configure how messages are cleaned up on a daily, weekly, or monthly basis.

The NotifySync solution provides Over-the-Air synchronization of email, calendar, contact, and task information, freeing users from cradling their BlackBerry to a PC to maintain synchronization. NotifySync provides a single solution supporting any BlackBerry over a variety of wireless networks such as CDMA/1XRTT/EVDO, GSM/GPRS/EDGE/3G-HSDPA or any 802.11x network.

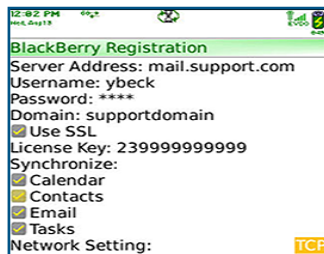

The NotifySync solution utilizes a "direct push" or "scheduled push" connection when connecting any BlackBerry to the user's email platform. With NotifySync all email, calendar, contact, and task information will be stored safely behind an organization's firewall while all data-in-motion is encrypted utilizing SSL. Should a user lose their BlackBerry, a remote wipe can be initiated to ensure all information on their BlackBerry is erased.

For more information on NotifySync for BlackBerry, please contact sales@notifycorp.com.

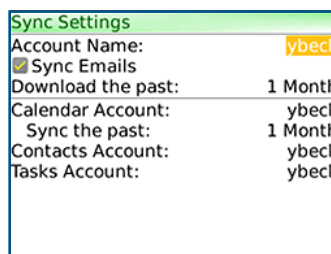

¹ No BlackBerry Enterprise Server (BES) or NotifyLink Enterprise Server required.

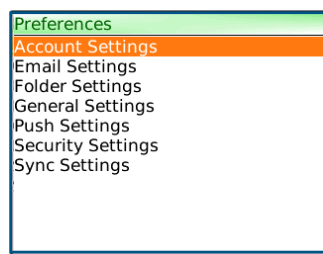

² Utilizes ActiveSync for direct connect to email platform.

NotifySync Mobility Solution

Email:

- Uses custom NotifySync email client to send, receive, reply to and forward emails
- Folder mirroring allows email folders from your mail account to be synchronized to the BlackBerry
- Attachment viewing is supported using the BlackBerry native viewers for Microsoft Word, Excel, and PowerPoint
- Emails with attachments can be forwarded

PIM: (Calendar, Contacts, and Tasks)

- Interfaces to the BlackBerry's native calendar, contact and tasks applications
- Synchronize calendar events in a configurable Look-Back/Look-Ahead range
- Multiple address books supported
- Remote lookup (Global Address List) retrieves contact information from the customers LDAP directory
- Receive and accept/decline meeting invitations

Security:

- SSL encryption protocol for data-in-motion between the BlackBerry and the email platform
- Remote wipe can be initiated by the email platform for a lost or stolen BlackBerry
- Inactivity timeout configurable by end user

Push types:

- Supports direct push
- Supports scheduled push intervals configurable by end user

Setup and configuration:

- All information for set-up and configuration are entered on the BlackBerry

Supported email platforms:

- Exchange Server 2003/2007, Windows Small Business Server 2003
- Kerio Messaging Server
- Zimbra Collaboration Suite
